

CHOOSE FM-200® AND BREATHE EASIER.

FM-200® is the leading choice for clean agent fire protection with tens of thousands of successful system installations worldwide. U.L. and Factory Mutual listed systems are engineered to discharge FM-200® in 10 seconds or less. FM-200® provides the margin of safety and performance that only time can buy. There is no better choice for safeguarding your high value assets.

And if you're waiting for an agent that is safer for people and the environment, don't hold your breath. FM-200® is the most widely tested product of its kind. The same active ingredient in FM-200®, HFC-227ea, has already been approved in Europe to replace CFC's in pharmaceutical inhalers, like those used for dispensing asthma medication.

For people, places and planet, you won't find a safer and more widely accepted fire extinguishant. Contact your local fire protection systems dealer to learn more about how FM-200® can protect your valuable assets. For help finding your nearest FM-200® dealer, call Great Lakes Chemical Corporation at 1-800-892-2527.
